Power Platform Highlights

Features included in this release

Feature Area	Feature Name	Enabled By
Power Apps	Vibe Coding 	On by default (Preview Environment)
Power Pages	Improve site security with security scan 	On by default
Power Automate	Quantify time and money savings delivered by automations	On by default
Power Automate	Debug easily into condition actions at runtime 	On by default
Copilot Studio	Use Model Context Protocol for D365 ERP 	On by default

Power Apps – Vibe Coding

The new Power Apps experience is an AI-native platform that builds solutions for business problems, including requirements, data, and full apps with generated code. With it, you can automate workflows, seamlessly integrate data sources, and accelerate app development without extensive coding knowledge.

Power Pages - Improve site security with security scan

Running a security scan on your Power Pages sites can improve their security by detecting and fixing vulnerabilities. Security scans protect your site from potential attacks and provide a safe online space for users.

The screenshot displays the 'Run scan' interface in the Power Pages Security section. A 'Start scan' button is visible in the top right. Below the header, a 'Security scan result' section shows a progress indicator of 34/37 and a message: '3 Security checks have raised alert for your site'. A table lists the security checks and their status.

Security Check	Status	Recommendation
> Content Security Policy (CSP) Header Not Set	Failed	Fix 1 alert
> Application Error Disclosure	Failed	Fix 1 alert
> Information Disclosure - Debug Error Messages	Failed	Fix 1 alert
Anti-clickjacking Header	Passed	No action required
Heartbleed OpenSSL Vulnerability	Passed	No action required
External Redirect	Passed	No action required
Server Side Include	Passed	No action required
Cross Site Scripting (Reflected)	Passed	No action required
Cross Site Scripting (Persistent)	Passed	No action required
Server Side Code Injection	Passed	No action required
Cloud Metadata Potentially Exposed	Passed	No action required
Server Side Template Injection	Passed	No action required
CRLF Injection	Passed	No action required
ELMAH Information Leak	Passed	No action required
Trace.asd Information Leak	Passed	No action required
.env Information Leak	Passed	No action required

Power Automate - Quantify time and money savings delivered by automations

The savings feature assists automation owners and the Center of Excellence in assessing and sharing the return on investment (ROI) within their organization. It values their work and provides proof to support additional automation projects.

Savings

With savings rules, measure the impact of your automation in terms of time saved and money saved. [Learn more](#)

Enable time-saving rule

Define how much time it usually takes to manually perform the actions being automated:

Manual processing time per successful run ⓘ

hours minutes seconds

Enable money-saving rule

Define how much money is saved by this automation based on the hourly rate of people previously performing the action:

Hourly rate ...which equates to \$1.67 per successful run

☐ Calculate money savings based on hourly rate

☐ Calculate money savings with user-defined baseline

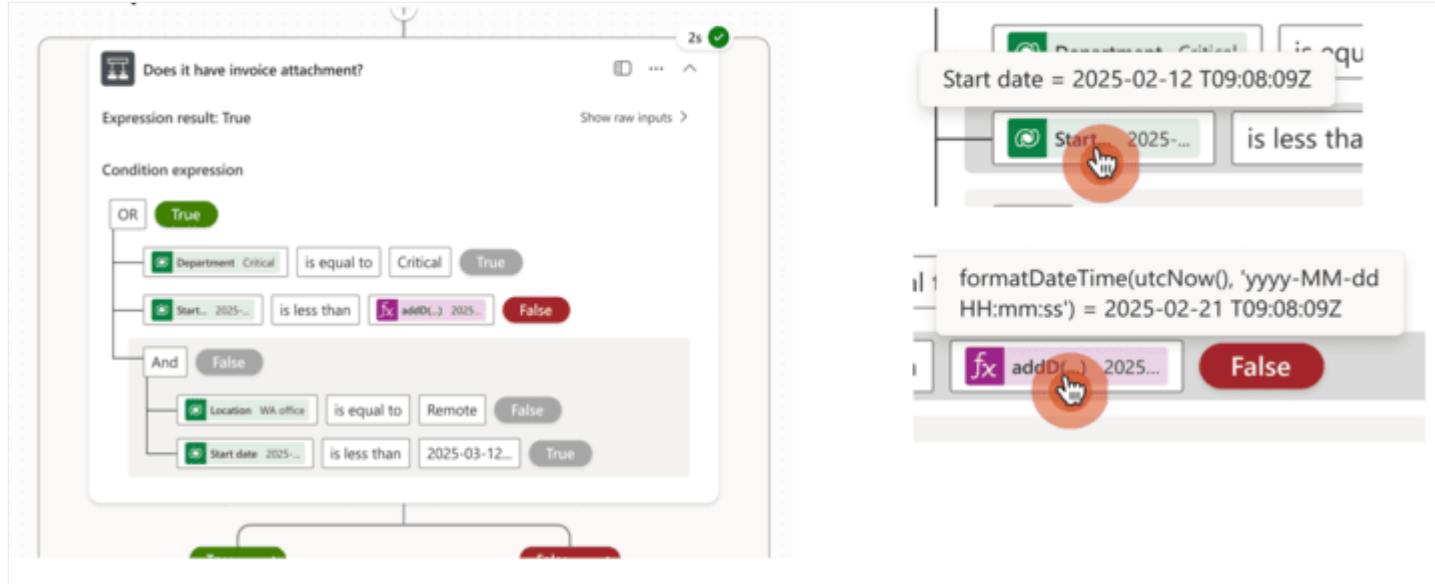

Define how much money is saved by this automation:

Money saved per successful run ⓘ

Last rule update: 03/11/2025, 15:56:20

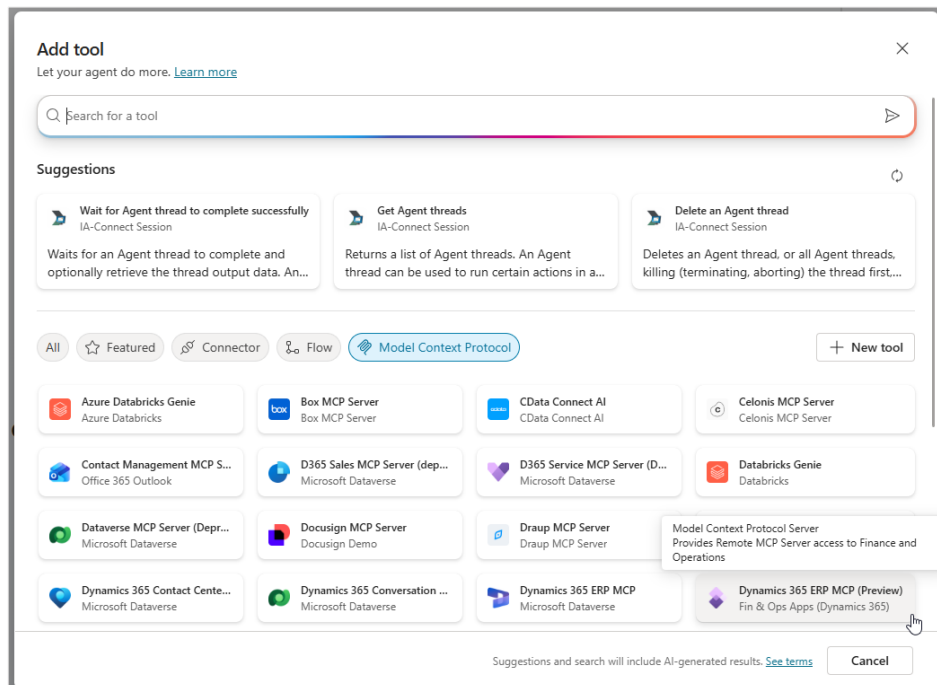

Power Automate - Debug easily into condition actions at runtime

Save time debugging your complex condition actions by displaying the values passed to dynamic content and the output of the expressions used in them.

Copilot Studio - Use Model Context Protocol for D365 ERP

The Dynamics 365 ERP MCP (Preview) server offers a flexible framework that allows agents to carry out data operations and access the business logic of finance and operations applications. Without the need for custom code, connectors, or APIs, developers can build agents that work with data and perform nearly any function available to users through the application interface.

What's new in D365 Customer Engagement

Features included in this release

Feature Area	Feature Name	Enabled By
Sales Hub	Streamline data entry with 'smart paste'	Sales Hub – Power App Settings
Sales Hub	Accelerate data entry using 'form fill assist' toolbar	Sales Hub – Power App Settings
Customer Insights Journeys	Create event portals with event and registration details using Power Pages  PREVIEW	Customer Insights Journeys – App Settings and Power Pages

Streamline data entry with 'smart paste'

With 'smart paste', you can insert content from your clipboard and receive automatic suggestions for matching field values. You can accept or ignore these suggestions and continue editing the form as usual. Simply paste the highlighted text with 'Ctrl+V' when no field is selected.

Accelerate data entry using 'form fill assist' toolbar

With 'form fill assist', you can upload supported files whose contents will automatically suggest relevant fields in the form. You can accept or delete all suggestions with a single click, as well as flexibly show or hide the toolbar. Additional features, such as 'smart paste' and 'feedback' are also available via the 'actions' menu.

Master Data

Customer	Mustermann GmbH
Contact Person	Bernhard Beispiel
Street	Mustermannstr. 4
Postal Code/City	12345 Musterhausen.
Type of Visit (onsite/Online)	Trade Fair
Website	www.mustermann.com
Mobile Phone	01234-456789
Fax	012345 54322

Conversation Summary

I met Bernhard Beispiel from Mustermann GmbH at the trade fair. Could you please contact him?

He visited us at the fair and showed interest in the Split XL for reselling. He is Head of Sales at Mustermann GmbH and is located at Mustermannstr. 4 in 12345 Musterhausen.

I think this could be a hot lead. If you can't reach him by email, you can also call him at 012345 54321. His email address is beispiel@mustermann.com.

I will upload the business card shortly, but this way you can already get in touch with him.

Create event portals with event and registration details using Power Pages

The new 'Event Portal' Template in Power Pages makes creating a professional event portal easy. Create an event in Customer Insights – Journeys, then link it to Power Pages. The event details will automatically transfer to build a complete event portal.
